

# POLLINATOR DATA SHEET

## Stationary observation

DATE: \_\_\_\_\_ LOCATION: \_\_\_\_\_

PLANT TYPE: \_\_\_\_\_

Common or scientific name

NUMBER OF FLOWERS OBSERVED: \_\_\_\_\_

If the plant has flowers in bunches, be sure to look closely and count how many flowers are in the bunch.

A count time of at least five minutes is recommended.

	COUNT 1	COUNT 2	COUNT 3
Start time/End time			
Total minutes			
<b>Use tick marks to count pollinators.</b> Record the number of visits by each type of pollinator. If a pollinator goes away and comes right back, count it twice or as many times as needed.			
Bumblebee(s)			
Carpenter bee(s)			
Western honey bee(s)			
Other bee(s) (note below)			
Unknown bee(s)			
Bird(s)			
Butterfly(s)			
Other (describe in notes)			
No pollinators*			

\*Didn't see any pollinators? Even a count of zero is important; please submit your data!

### NOTES:

Other pollinators could include bats, beetles, moths, flies, wasps, or other insects.

Submit your data: [greatsunflower.org](https://greatsunflower.org)
